Career Objective

B.Tech Computer Science graduate targeting entry-level roles in Artificial Intelligence, Machine Learning, Data Analytics, and Python Backend Development. Focused on building production-style AI applications, explainable ML systems, computer vision solutions, and data-driven tools that solve real-world problems.

Professional Summary

- AI/ML and Python developer with hands-on experience across machine learning, deep learning, computer vision, data analytics, REST APIs, and full-stack dashboards.
- Built production-style projects including a credit risk assessment platform, handwritten character recognition app, research paper assistant, object detection system, and accident detection model.
- Delivered measurable ML outcomes including 99.46% test accuracy on an arXiv subject classifier and 76.15% ROC-AUC on a credit risk scoring model.
- Completed Deloitte Forage simulations in Technology, Cyber, and Data Analytics, strengthening SDLC, risk assessment, incident response, and business analysis skills.
- Comfortable with Python, FastAPI, Flask, MongoDB, TensorFlow/Keras, PyTorch, OpenCV, XGBoost, SQL, Power BI, Tableau, Bootstrap, Docker, Git, and REST APIs.

Education

B.Tech in Computer Science & Engineering — **Expected 2026**
Vignan Institute of Technology and Science — CGPA: 7.9/10

Intermediate – MPC — **2022**
TSRJC, Bandarupally Mulugu — CGPA: 9.5/10

SSC – 10th Standard — **2020**
Telangana State Model School — CGPA: 10/10

Experience

Machine Learning Intern — **1 Month**
CodeAlpha — *Remote*

- Completed a one-month Machine Learning internship focused on practical ML workflows, model building, evaluation, and project implementation.
- Applied Python, data preprocessing, feature preparation, model training, performance evaluation, and visualization techniques.
- Strengthened end-to-end ML problem solving by converting raw data into model-ready inputs and interpreting results for improvement.

Deloitte Technology Virtual Experience Program | Forage — **June 2026**
Virtual Job Simulation — *Remote*

- Completed software development tasks based on simulated client requirements, business constraints, and delivery expectations.
- Prepared solution ideas, technical documentation, and a structured development proposal aligned with the client brief.
- Applied SDLC, system design, stakeholder communication, and business analysis concepts to professional technology scenarios.

Deloitte Cyber Virtual Experience Program | Forage **June 2026**
Virtual Job Simulation *Remote*

- Analyzed cybersecurity scenarios to identify risks, vulnerabilities, threat indicators, and mitigation strategies.
- Applied incident response thinking to prioritize security issues and recommend practical controls for organizational protection.
- Strengthened understanding of cybersecurity fundamentals, risk assessment, security analysis, and threat identification.

Deloitte Data Analytics Virtual Experience Program | Forage **June 2026**
Virtual Job Simulation *Remote*

- Performed business data analysis tasks to interpret datasets, identify trends, and convert observations into useful findings.
- Completed forensic technology-style exercises involving data interpretation, investigation, and evidence-based reasoning.
- Improved skills in business analytics, data storytelling, visualization thinking, and structured reporting.

Technical Skills

Programming Languages	Python, C, Java, SQL
AI/ML	Machine Learning, Deep Learning, TensorFlow/Keras, PyTorch, XGBoost, TF-IDF, OpenCV
Data Analytics	Power BI, Tableau, Data Visualization, Feature Engineering, Model Evaluation
Web Development	HTML, CSS, Bootstrap, Flask, FastAPI, REST APIs, Jinja2
Databases & Backend	MongoDB, Firebase, JWT Authentication
Tools	Git, GitHub, Docker, Jupyter Notebook, pytest
Professional Skills	SDLC, System Design, Problem Solving, Technical Documentation, Business Analysis, Risk Assessment, Incident Response, Threat Identification

Projects & Research Work

Research Paper Assistant **Jan 2026 – Feb 2026**
Python, FastAPI, MongoDB, TensorFlow/Keras, TF-IDF

- Built a full-stack research assistant that predicts subject areas from text, PDF, and DOCX inputs and recommends relevant papers.
- Integrated Semantic Scholar, Crossref, arXiv, and OpenAlex APIs to support multi-source academic paper discovery.
- Trained a TF-IDF + Keras classifier on 41,105 deduplicated arXiv abstracts, achieving 99.46% test accuracy and 0.9687 AUC.
- Added JWT authentication, query history, analytics, and a responsive dashboard for user-friendly paper exploration.

Credit Scoring Intelligence System **2026**
Python, FastAPI, XGBoost, scikit-learn, Bootstrap, Docker

- Built an ML-powered fintech application for credit risk assessment and loan underwriting with FastAPI REST endpoints and a responsive Bootstrap UI.
- Engineered 86 features from 8 applicant inputs using the Home Credit dataset and trained an XGBoost classifier with 76.15% ROC-AUC and 72.73% accuracy.

- Implemented explainable outputs including risk category, confidence score, key review drivers, and decision summary for loan review workflows.
- Added input validation, error handling, pytest coverage, model metadata, and Docker-ready deployment structure.

Handwritten Character Recognition **2026**
FastAPI, PyTorch, EMNIST, CNN

- Developed an AI-powered handwritten character recognition system supporting digits, uppercase letters, and lowercase letters.
- Built an interactive drawing-canvas interface with real-time prediction and confidence scoring for character classification.
- Designed a FastAPI inference workflow using PyTorch and EMNIST ByClass, with baseline checkpoint support for CNN-based prediction.

Accident Detection System **Sep 2024 – Dec 2024**
Machine Learning, Python

- Designed a machine learning-based accident detection model using motion and sensor data to support road safety alerts.
- Prepared datasets, trained detection logic, and evaluated responsiveness for real-time accident prediction use cases.

Object Detection System **Feb 2024 – Apr 2024**
Python, Deep Learning, OpenCV

- Built a real-time object detection system using OpenCV and pretrained YOLO/SSD models.
- Applied image processing and computer vision techniques for object recognition and classification.
- Enhanced efficiency using multi-object tracking for automation-focused scenarios.

Image Steganography **Mar 2023 – Apr 2023**
Python, GUI-Based Application

- Developed a GUI-based image steganography system for secure data hiding and message extraction.
- Focused on preserving image quality while enabling easy hidden data retrieval through a user-friendly interface.

Certifications

- Programming Essentials in C – Cisco
- Programming Essentials in Python – Cisco
- Modern AI – Cisco
- Internet of Things – Cisco
- DevOps – Simplilearn
- Ethical Hacking – Great Learning
- Anthropic MCP Server and Advanced MCP Server – Anthropic

Achievements & Participation

- Active participant in Smart India Hackathon (SIH), focused on AI/ML-based solutions.
- Participated in competitive hackathons and ideathons at HITAM, CMR, and Vignan.
- Completed practical project work across ML, computer vision, fintech risk scoring, research automation, and handwritten character recognition.

Strengths

- Analytical thinking, ownership, communication, leadership, teamwork, adaptability, problem-solving, and continuous learning.
- Strong interest in AI/ML output quality, practical implementation, technical documentation, and product-focused problem solving.

Additional Details

Languages	English, Telugu, Hindi
Interests	Artificial Intelligence, Machine Learning, Deep Learning, Computer Vision, Data Analytics
Availability	Available for entry-level roles, internships, and trainee positions

Declaration

I hereby declare that the information provided above is true and correct to the best of my knowledge.
